

Why are Mosquitoes here all year long?

Mosquitoes love warm weather. While it's cold in other places during the winter, the San Gabriel Valley is nice and toasty.

Mosquitoes grow in water. Whether it's leftover rain water or your dog's water bowl, it will attract mosquitoes. Yikes!

Mosquito eggs can survive without water up to a year and hatch when activated by water ... this is why Mommy mosquitoes lay eggs at the water line of containers.
